FRONT-END DEVELOPER (VUE / REACT)

Front-end developer with about **4 years** of experience specializing in Vue.js and Nuxt, possessing a strong foundation in JavaScript, component-driven architecture, and modern web development practices. Currently deepening my knowledge and skills in **React** and **Next.js** (App router), actively learning these technologies to transition and contribute effectively to React-based projects.

PROFESSIONAL EXPERIENCE

Tabdeal

May 2025 - Present

- Led the migration of a large-scale cryptocurrency web platform from Nuxt 2 to Nuxt 3, improving app performance, scalability, and maintainability.
- Collaborated within a 12-member front-end team, participating in code reviews, mentoring peers, and maintaining high coding standards.
- Implemented and configured SEO-related meta tags, page head elements, and reCAPTCHA integrations to enhance both security and visibility.
- Contributed to and followed established Git Flow, CI/CD pipelines, and deployment processes, ensuring smooth development and release cycles.
- Optimized SSR and hydration performance, improving initial page load times and overall user experience.
- Actively learning React and Next.js through side projects, enhancing cross-framework skills for future front-end opportunities.

Technologies: Javascript, Vue, Nuxt, Pinia, Tailwind, Sass, Webpack, SWR, SSG, Git

Ayan (Ghabzino)

2022 - 2025

- Developed a comprehensive admin panel for police and billing services, implementing dynamic UI components with Vue3 option api.
- Created a centralized Design Language System to unify UI design across applications, delivering reusable components that improved overall product quality.
- Actively collaborated with backend developers, providing technical suggestions that improved API design and project efficiency.
- Contributed to the Ewano (MCI) project by building form input and result pages for citizen service inquiries, ensuring smooth data flow and usability.
- Collaborated on the Pishkhan24 project as a part-time developer, creating responsive results pages using the Composition API and TypeScript.
- Using pure JS, CSS and Sass to build up Mini Mench project, which involved responsive Design across all devices
- Integrated RESTful APIs to enhance application functionality, providing seamless data flow and user experience.

Technologies: HTML5, Sass, Responsive Web Design, JavaScript, Vue Router, State management (Pinia), Vite, Gulp

Novaday

June 2022- oct 2022

- Worked on a bilingual web application with dark/light mode using the Vue.js framework.
- Worked with Vuex, Pinia, and Vue Router to manage state and implement dynamic, modular navigation.
- Integrated RESTful APIs using Axios for seamless data fetching and realtime updates.

Technologies: Vue2, Vuex, Webpack, Tailwind

PROJECTS

Tabdeal

A cryptocurrency exchange website built with Nuxt.js, focused on providing a fast and secure trading experience.

Ghabzino Counter

The Ghabzino Counter Panel is developed to serve police offices,, insurance offices and their customers; with a streamlined solution for paying all fines and bills simultaneously, eliminating the need to repeat the same process for each inquiry.

Portfolio (Next.js)

Currently building a personal portfolio site using React and Next.js to deepen expertise in modern React frameworks, routing, and server-side rendering concepts.

Mini Mench

A responsive landing page for the Mini Mench game. The real challenge of this project was ensuring responsiveness across all devices due to its complex design. I used pure JS, CSS and Sass to develop this project.
